# TEN SOLID REASONS WHY *Labgear* UHF AERIALS ARE PREFERRED ...

- ①★★ The rectangular section boom is scientifically proportioned to combine mechanical robustness with light weight.
- ②★★ Extra strong SOLID rod elements combine optimum bandwidth with low wind resistance.
- ③★★ UHF8 and UHF14 series have twin "snap-up" stacked reflectors, mounted on polypropylene moulding, ensuring good "ghost" rejection.
- ④★★ The unique resonator element provides an excellent feeder match and avoids the need for a 'balun'.
- ⑤★★ Only 4 basic designs for every possible application.
- ⑥★★ Model UHF14 R plus the Labgear UHF Signal Booster (E5122 A - Retail 5 gns) provides 27 dB overall gain for fringe use (see illustration on front cover).
- ⑦★★ Models illustrated cover ALL UHF channels allocated for London and surrounding area. Models for other areas available soon.
- ⑧★★ Mast mounted models are fitted with tilting clamp.
- ⑨★★ Size for size LABGEAR UHF aerials are unequalled in performance.
- ⑩★★ Really attractively priced.
